ACKNOWLEDGEMENT

It is with the profound feeling of gratitude we would like to express our sincere thanks to our institution **DR. T. THIMMAIAH INSTITUTE OF TECHNOLOGY, K.G.F** for providing excellent infrastructure for the successful completion of project work.

We wish to express a wholehearted thanks to our principal **Dr. Syed Ariff** for his kind support in carrying out this project work.

We would like to extend hearty thanks to our **HOD, Prof. Vijaya Bharathi M** for being a constant support of encouragement to carry out the project work successfully.

We would like to extend hearty thanks to our guide **Mrs. Jesudas J Asst.Prof,** for his valuable suggestions, guidance and support in the completion of this project work.

We would also like to thank project Co-Ordinator **Mrs. Jenitha.A Associate Prof,** for her timely support in the completion of this project work.

We would like to thank all teaching and non-teaching staff who were directly and indirectly supported for carrying out this project work successfully.

We extend our hearty thanks to our parents, friends for all the moral support provided during the preparation for the project work.

SYNOPSIS

As we are aware of the current pandemic situation that is Covid-19 which is spreading all over the world. Covid-19 spreads mainly by droplets produced as a result of coughing or sneezing of Covid-19 infected person, it can also spread from contact with infected surfaces or objects. Any person who comes into close contact with someone who has Covid-19 is at increased risk of becoming infected themselves.

As it is spreading widely it is difficult to get the report on required time, hence to detect Covid-19 “Positive or Negative” within 30minutes of time we are using an efficient IoT based Covid-19 Monitoring System Using CNN Classifier. In this process we are using sensors such as heart rate sensor, temperature sensor, and respiratory sensor to collect data from a person and it is transmitted wirelessly with the help of ESP8266 module and the data is received by using Arduino. These data are being processed using MATLAB and CNN Classifier is used to predict the result whether it is “Positive or Negative” based on this result, best accuracy and efficiency is achieved.

ABSTRACT

The conversion of sun light into electric energy through solar panels is significant compared to other renewable sources. The energy extracted from the solar panel depends on solar light incident on the solar panel, but the constant variation in the sun's position decreases the power generation efficiency. In order to extract maximal energy, the solar panel should face the sunlight at normal angle throughout the day. Solar tracker tilts the panel towards the sun light direction.

The automatic sun tracking solar panel will harness a significant amount of energy from available sun light. Single axis type of solar tracker is used which has one degree of freedom of rotation. Closed loop tracking approach is used with LDR's, an ATmega2560 microcontroller and a DC motor forming the principal components of the circuit model. Based on the signals generated from LDR's, microcontroller provides signals to the motor for tilting the solar panel towards the direction of maximum incident sun rays, which will increase the power generation efficiency. The efficiency of the proposed system is 71%. The information regarding status of solar tracking system is shared through IoT.

ACKNOWLEDGEMENT

We express our sincere gratitude to the following people and acknowledge them for having us in completing the project successfully.

We would like to express our deep gratitude to **Dr. T. Thimmaiah Institute of Technology** for the support in successful completion of this project.

We are very much thankful to **Dr. Syed Ariff, Principal, Dr. TTIT** and **Dr. P D Sudersanan, Head of the Department, Department of Mechanical Engineering, Dr. TTIT** for providing support for all project related activities.

We sincerely thank by heart and soul to our project guide **Mr. Balasubramaniam N S, Assistant Professor, Department of Mechanical Engineering, Dr. TTIT** whose timely support and suggestions went a long way in the completion of project.

Finally, we thank all the teaching and non-teaching staffs of Dr. TTIT, and the encouragement in our endeavor and of course, nothing could have come true without the support and cheerful encouragement of our parents and friends

ABSTRACT

In the proposed work algorithms have been developed to minimize the placement of number of sensors to detect leaks in the looped pipe network using pressure sensitivity analysis. The proposed work starts with assumptions that leakages are constant demand that is assumed at junction and every node has a sensor. The algorithm of sensor placement uses the pressure sensitivity matrix which is the differences between the pressures calculated without leak and with leak values at nodes by EPANET simulation. The simulated pressure variations caused by all potential leaks are stored in the Fault Signature Matrix (FSM), with as many rows as sensors, n_s , and as many columns as potential leaks, n_l . Each value of the FSM matrix is binarized according to a threshold: '1' indicates that the sensor in row i truly detects a leak in column j ('0' indicates no detection). The minimum number of sensor is obtained using binarised matrix in such a way that every leak present in the network should be detected and isolated. The Genetic Algorithm (GA) and Particle Swarm Optimization (PSO) techniques are used to find the minimal sensor placement for identification of leaks in pipe networks, further the comparison between the two techniques has made. The implementation of present algorithms shows the placement of sensors are minimized up to 15-20 % of total number sensor placed at nodes. The problem identifies the best location of minimum number sensors in the pipe network.

Keyword: Pressure sensitivity analysis; Isolability; Detectability; EPANET; Threshold.

ACKNOWLEDGEMENT

It is with the profound feeling of gratitude we would like to express my sincere thanks to our institution **Dr. T. THIMMAIAH INSTITUTE OF TECHNOLOGY, K.G.F** for providing excellent infrastructure for the successful completion of this project.

We wish to express a wholehearted thanks to our **Principal Dr. Syed Ariff** for providing good infrastructure for undergoing this project in college.

We would like to extend hearty thanks to our **Dean and HOD, Prof. Ruckmani Divakaran** for being a constant support of encouragement to carry out the project successfully.

We would like to thank our **guide, Mr. Prasanna Balasubramanyam.S, Asst. Prof.**, for his valuable suggestions, guidance and support in the completion of this project.

We would also like to thank our **project coordinator, Mrs. Jenitha, Asst. Prof.**, for her valuable suggestions, guidance and support in the completion of this project.

We would like to express our sincere thanks to our sponsor **Karnataka State Council for Science and Technology (KSCST), Bangalore** for providing fund for successful completion of this project.

We would like to thank all teaching and non-teaching staff who were directly and indirectly supported for carrying out this project successfully.

We extend my hearty thanks to our parents, friends for all the moral support provided during the preparation for this project.

SYNOPSIS

In this project, we will be designing an Arduino based system for LPG Gas Leakage detection and Emergency response. Sometimes the presence of LPG leakage can be hazardous. In such case, there should be a system which detects the presence of gas and also devices a safety mechanism which can avoid any catastrophic event. This proposed system can be integrated into a unit that can give audio suggestions so as the person may not panic and follow the instructions when a gas leakage is detected, it turns ON the exhaust fan to evacuate the gas from the room, turns OFF the gas cylinder regulator knob.

The sensed gas level is transferred to a real-time web application via wireless communication technology and through the IoT application BLYNK. The data can be accessed on any standard computer connected to internet or Android smart phone using BLYNK application. BLYNK is an IoT platform to control Arduino over internet. In this project BLYNK provides a digital dashboard on the smart phone that displays real-time readings. The system also sends SMS to Family members using GSM technology which provides offline support on the cell phones which lacks internet facility. Hence, the proposed system provides both online and offline support.
